## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 13, 14, and 16-25 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 13, 14, 16-23, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakamoto (4,983,867) in view of Ando (4,755,732).

Regarding claim 13, Sakamoto shows all of the limitations of the claimed invention including the stator windings being coplanar and arranged so as to be unpaired (Figure 3).

Sakamoto does not show a network having n inputs and m outputs for driving the motor.

Ando shows a network having n inputs (TR1-TR10) and m outputs (nodes of A-E) for driving the motor (Figures 1-13D) for the purpose of increasing the accuracy in rotation.

Since Sakamoto and Ando are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the network of Ando in the motor of Sakamoto for the purpose discussed above.

Regarding claims 14, 16-23, and 25, it is noted that Sakamoto and Ando also show all of the limitations of the claimed invention.

4. Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sakamoto in view of Ando and further in view of Ogawa et al.

Regarding claim 24, the motor of Sakamoto modified by Ando includes all of the limitations of the claimed invention except for the wave-guide switch.

Ogawa et al. use the motor as the wave-guide switch for the purpose of controlling the satellite.

Since Sakamoto, Ando, and Ogawa et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to make the motor as a wave guide switch as taught by Ogawa et al. for the purpose discussed above.

### **Conclusion**

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
